SiteBlitz: domain and business email plan

Researched 12 November 2026 from official pages, cross-checked twice. All prices in rupees **including 18% GST** (we are not GST-registered, so GST is a real cost). Prices can change; confirm at checkout.

> **In short:** buy **siteblitz.in** on Hostinger India for 3 years (about **₹2,123** once), and use **Google Workspace Business Base** for email (**₹1,402 a year** per person). That gives us real business Gmail, like **hello@siteblitz.in**, plus up to **30 extra addresses free**. Total for 3 years: about **₹6,328** (around ₹176 a month), versus ₹14,652 the usual way.

1. The domain: siteblitz.in

- **It is available.** The official .in registry confirmed "available for registration" on 12 Nov 2026.
- **Where to buy: Hostinger India.** Prices are in rupees, payment by UPI or Indian card works, and they handle the registry's identity check.

Option at Hostinger	Pay now	Renewal after that
1 year at a time	₹1,061	₹1,061 / year
3-year deal (₹1 first year + ₹899 + ₹899, plus GST)	**₹2,123**	**₹1,061 / year from year 4**

Note: Hostinger also shows ₹549, but that is the price to *transfer* a domain in, not to buy a new one.

> **Two .in rules to know:**
> 1. **Identity check (KYC) is compulsory.** After buying, the registrar asks us to verify identity within a few days. If we skip it, the domain can be suspended.
> 2. **"Hide my name" services are not allowed for .in.** We must give our real name and address. This is fine: the registry's public lookup already hides the owner's name, email and street address (checked on existing .in domains). Only the state and country show.

2. Business email: Google Workspace (this is "business Gmail")

- **siteblitz.in@gmail.com is not business email.** It is just a normal free Gmail ID; customers would still see "@gmail.com".
- Real business Gmail = **Google Workspace**. We get the normal Gmail app and inbox, but the address is **hello@siteblitz.in**.

Workspace plan	Per person / month	Per person / year	What it gives
Business Base (pick this)	**₹117**	**₹1,402**	**Gmail on our domain, 20 GB storage, Google Meet (100 people), Drive, Docs, Calendar. Up to 20 users.**
Business Starter (what resellers usually sell)	₹319	₹3,823	Same plus Gemini AI and 30 GB. We don't need it now.

- 14-day free trial. The yearly plan is billed monthly, but you cannot cancel mid-year without paying the rest of the year.

- Google currently shows 3 months at half price for Base; if it applies to us, year 1 is ₹175 cheaper.
- A second login for you (your own private mailbox) costs another **₹1,402 a year**.

3. Extra addresses (aliases): yes, free

- Google's own words: **"up to 30 email aliases for each user at no extra cost."**
- Plan: **hello@siteblitz.in** is the main inbox. **support@** and **billing@** are aliases now; **ads@** later when an ad account needs it.
- All of them land in the same inbox, and we can reply from any of them.

4. Comparison

Way	Year 1	Year 2 and 3 (each)	3 years total	Notes
Normal way: domain bought yearly + Workspace Starter	₹4,884	₹4,884	₹14,652	More features than we need
Our plan: Hostinger 3-year + Workspace Base	**₹3,525**	**₹1,402**	**₹6,328**	**Same Gmail experience, about 57% cheaper**
Cheapest: domain only + Zoho Mail free plan	₹2,123	₹0	₹2,123	Only if Zoho offers the free plan at sign-up (not guaranteed); uses Zoho's app, not Gmail; 5 GB

5. Options we checked and rejected

- **Free trick: forward email to personal Gmail and reply "as" hello@siteblitz.in.** Many YouTube and blog guides teach this. **Google is ending it in January 2027** for non-Google addresses (official Google help page). Not worth setting up now.
- **Forwarding + a separate sending service + a desktop mail app.** Free and technically works, but it is two systems to maintain, and it is easy to reply from a personal address by mistake.
- **Buying the domain abroad (Porkbun etc.).** Slightly cheaper renewals, but billed in dollars with card forex charges. Their free "hide my name" feature can't be used for .in anyway.
- **Cloudflare.** It does not sell .in domains.

6. Steps and who does what

1. Buy siteblitz.in on Hostinger India, 3-year term (check the cart total is about ₹2,123). Real name and address. Finish the KYC when asked.
2. Start Google Workspace **Business Base**, choose "I have a domain", create hello@siteblitz.in.
3. Copy the records Google shows into Hostinger's DNS settings: ownership check, mail delivery (MX), and three anti-spam records (SPF, DKIM, DMARC).
4. Add aliases: Admin console → Directory → Users → hello → Add Alternate Emails.
5. Send and receive one real test email (to a Gmail and an Outlook address). Then Claude switches the email address on in the website.

Steps 1-4 need payment and logins, so we do them; step 5's code change is done by Claude.

7. Not yet confirmed

- The exact cart total for Hostinger's 3-year deal.
- Workspace price without the yearly commitment (reported as about ₹120/month + GST; not shown on Google's page to us).
- Whether Zoho's free plan is offered to a new Indian account.

8. Website status (same day, for context)

Area	Rating /100	Why
Performance	70	Lighthouse looks good (87-94), but the main content appears in 2.9-3.7 s on a mid-range phone test; Google's "good" limit is 2.5 s. Taps during loading are slow (0.5-0.9 s).
SEO readiness	88	38 pages checked, 0 problems; Lighthouse SEO, accessibility and best practices all 100.
SEO actual power	0 for now	The new site is not live yet, so Google has nothing to rank.
Mobile	75	No sideways scrolling on phone widths, menu works with keyboard, 16 px text. Never tested on a real phone yet.

Before going live: push the finished work to GitHub, set the site's web address in the hosting settings (the deploy stops without it), review the refunds page wording, then connect siteblitz.in.
